

DL-Navigator

Overview

DL-Navigator is a simple to install, simple to operate integrated videoconferencing and distance education room control system. It allows the end user both local and far-end control of a variety of audio and video equipment without requiring additional programming. Device drivers for audio and video equipment come with the standard package, eliminating the expense and complexity of third-party programming.

Easy to Operate and Manage

The DL-Navigator system allows a non-technical operator to control all the devices in the room with minimal complexity, and move from one network room to the next with little to no learning curve because of consistent control features and functions.

Extensive Control Library

The system comes shipped with a variety of device drivers already installed. With DL-Navigator, the technician selects the make and model of the device to configure. Dascom works with major providers of audio, video and transmission equipment in developing our extensive control library. The library is growing everyday based on customer demand.

No Additional Programming

The DL-Navigator system comes fully programmed off-the-shelf. Other control systems on the market require extensive third-party programming prior to installation – increasing both system complexity and cost.

Maximum Flexibility in Applications

DL-Navigator has been leveraged for distance education, general local and far-end videoconferencing equipment control and multimedia presentation for multiple markets. DL-Navigator is the ideal control system for any environment requiring an efficient network touch screen control system that is simple to operate. The system's open architecture allows customization to varying control requirements.

Features

- Local and Far-End Control
- Network and Instructor Control
- One Rack-Unit Appliance with Quiet Operation
- Optional Managed Security and Monitoring

Benefits

- Simple to Use and Operate
- No Additional User or Third Party Programming
- Customizable Buttons and System Preferences
- System Shipped with Device Drivers Installed
